

Checkamo Startup Summary & Global Expansion Strategy Documentation

Prepared by

David Francis Effiong (Team Lead/Founder)

and reviewed by

Uchechi E. Chibuzoreke (Product Manager)

Background

Trust is a significant barrier to safe transactions in Nigeria and most parts of Africa today, particularly in informal markets, online platforms, and peer-to-peer services. According to the National Bureau of Statistics, over 42% of Nigerians engage in informal transactions with limited or no means of verification.

The Nigeria Inter-Bank Settlement System (NIBSS) reported a loss of over ₦5 billion to fraud in 2023, highlighting widespread distrust in online and remote transactions. Scams, fake listings, identity theft, and fraudulent services are common on digital platforms, discouraging users from buying, hiring, or renting. No accessible, decentralized system exists for ordinary citizens to verify the authenticity of people, products, places, or promises before committing money or time.

This trust deficit leads to missed opportunities, financial losses, and insecurity in commerce, employment, and service delivery. Vulnerable groups such as youths, women, small business owners, and remote buyers are disproportionately affected by this gap. There is a growing demand for community-powered, real-time, and cost-effective verification tools that empower users to transact with confidence.

Product Overview

Checkamo is a trust-powered verification platform that connects users with local verifiers who can inspect, validate, and report on products, properties, and people before any transaction occurs. Verifiers upload photos, videos, voice notes, and share real-time location to ensure authenticity. Our platform uses AI, multilingual support, and an incentive-driven ecosystem to democratize trust.

Mission

Building the “Trust Layer for Transactions in Africa”, a social safety net for buying, hiring, verifying, and delivery from anywhere in the world..

Product Vision

To become the world’s most reliable, decentralized trust network for verifying anything: people, places, products, and promises. Checkamo will enable anyone, anywhere, to confirm what they care about before committing time, trust, or money.

Problem Statement

Across Nigeria and other emerging markets, individuals and businesses often face fraud, misinformation, and wasted time when trying to buy products, rent properties, or connect with service providers. The existing system lacks reliable verification and secure middlemen, especially in industries like real estate, marketplace goods, logistics, companionship, and more.

Pain Themes:

- Trust issues (fear of scam, fraud, ghosting)
- Physical & emotional stress from self-verification
- Lack of middlemen with reputation systems

- Lost time and missed opportunities

Solution:

A platform that lets users hire trusted, nearby middlemen to verify anything on their behalf, from apartments to clients to gifts. Verifiers upload photos, videos, voice notes, and their real-time location, and the platform ensures transparency, ratings, and layered access.

A platform where anyone can request a verified middleman to check and confirm a product, property, or person before paying from anywhere.

Target Users:

- Working professionals too busy to inspect
- Students, expats, immigrants, tourists, and citizens looking for apartments
- Shoppers buying from other cities
- Service workers needing verified clients
- Small business owners managing remote logistics
- People needing boots-on-ground support
- Property agents, vendors, dealers, estate moguls, and land/property owners in search of patronage.

User Personas

Ada – Online Shopper in Lagos

Age: 28

Occupation: Social media manager

Tech Comfort Level: High

Pain Point: Worries about scam sellers and fake products when shopping on Instagram or WhatsApp

Needs: A way to ensure items are real and in good condition before payment

How Checkamo Helps: She can hire a local verifier to check the item, share photos and videos before she commits

Goal: Avoid being scammed or disappointed with online purchases

2. Emeka – Land/House Renter

Age: 34

Occupation: Software engineer relocating to Abuja

Tech Comfort Level: High

Pain Point: Struggles to find trustworthy agents and hates the stress of traveling just to view apartments

Needs: Remote property verification

How Checkamo Helps: Sends a verifier to inspect properties and confirm details before he visits or pays

Goal: Make informed rental decisions without traveling first

3. Miriam – Small Business Owner (Hair Vendor)

Age: 30

Occupation: Owner of a hair extension brand.

Tech Comfort Level: Medium

Pain Point: Concerned about paying unknown vendors for bulk orders without confirmation

Needs: Verification of quality and existence of vendors/suppliers

How Checkamo Helps: She uses the platform to verify vendor shops and products before making wholesale orders

Goal: Protect her business from fraud and bad suppliers

Global Scale Strategy

Stage	Strategy	Details
Nigeria Launch	Hyperlocal pilot	Start with Calabar, Lagos, Abuja, and Port Harcourt. Focus on real estate and errand-based verifications.
Africa Expansion	Regional partnerships	Partner with delivery firms, NGOs, and marketplaces (e.g., Jumia, Jiji). Launch multilingual bots.
UK & US Entry	Diaspora-backed pilots	Launch in cities with high Nigerian/West African diaspora. Target Airbnb, student housing, and marketplace verifications.
Global API Layer	B2B integrations	Provide verification-as-a-service APIs to marketplaces and logistics platforms globally.

Execution Plan (Roadmap)

Phase 1 (MVP)

- Landing Page + Early Access (Webflow/Framer)
- AI-powered WhatsApp Concierge (Search + Preview)
- Manual verifier assignment system
- Explore Mode (HTML/CSS Swipe UI)
- Basic Verifier Leaderboard, Tip system
- Limited access swipe-to-view verification feed (limit-based preview)

Phase 2

- Escrow Integration (Paystack/Flutterwave)
- GPS Live Tracking
- Danger Zone flagging & reviews
- Verifier/Client profiles with media uploads
- Multilingual prompt selection

- Verified landlord or vendor contact access for a fee
- Property filtering box (e.g., 2-bedroom, near school, etc.)

Phase 3

- AI Matching: Jobs ↔ Verifiers
- API ingestion from Jiji, Amazon, Jumia, etc.
- Admin dashboard for disputes, audit, and training
- Vendor/Partner Marketplace Portal
- Errander (tasker) marketplace for errands (e.g., laundry)

Phase 4

- Cross-border requests
- NLP Bots + Internationalization
- Government & Police Integrations
- Real-time verification as-a-service API
- Trusted pool for VIP clients in discreet industries

CHALLENGES

1. Verifier Legitimacy & Misconduct

Challenge: Some verifiers may submit fake media, delay tasks, or act unprofessionally — which hurts user trust.

Solutions:

- Use ID & face verification (via Smile Identity, VerifyMe Nigeria).
- Require live GPS location sharing during a task.
- Have a photo/video timestamp watermark system.
- Build a reputation score based on reviews, timely completion, and community feedback.
- Enable in-app reporting & suspensions.

2. User Safety & Privacy

Challenge: Discreet users (like sex workers or private clients) may be concerned about exposure, blackmail, or misuse of media.

Solutions:

- Implement media expiration (photos/videos disappear after 1 view unless VIP).
- Offer anonymous mode where no personal contact is shared until trust is earned.
- Restrict screen-recording or saving unless subscribed.
- Use access logs to track who viewed what, when.

3. Scalability of Human Verifiers

Challenge: Matching users with available, qualified verifiers in real-time may become difficult as the platform grows.

Solutions:

- Start with manual matching and graduate into algorithmic matching based on availability + proximity.
- Use a bid-based system: verifiers claim tasks based on distance, price, and trust score.
- Segment verifiers by categories: property, delivery, discreet, products, etc.
- Build a waitlist and training module to onboard more.

4. Trust in Your Platform (Reputation Risk)

Challenge: One or two bad experiences can damage your platform's trust especially in Nigeria and similar markets.

Solutions:

- Introduce escrow/pay-upon-confirmation model.
- Add a live review feed like Airbnb or Uber: photos + user feedback.
- Display verified badges and top verifier rankings.

- Provide insurance/refund guarantees for verified tasks gone wrong.

5. Tech & Infrastructure Cost

Challenge: Real-time media, GPS tracking, and secure user interactions can strain your backend and cost money.

Solutions:

- Use Firebase (Google) or Supabase to start free/cheap with hosting, authentication, and file storage.
- Store only compressed/optimized media (not raw HD videos).
- Only allow uploads within time limits (e.g., 3-minute max video).
- Monetize early with VIP/pay-per-view features.

Technical Requirements

Frontend (User Interface)

- HTML
- CSS (Tailwind or plain)
- JavaScript (Vanilla + React)
- React / React Native

Backend

- Firebase (Auth, DB, storage)
- Supabase (PostgreSQL)
- [Node.js](https://nodejs.org/)
- Cloudinary

Other Integrations

Payments	Paystack, Flutterwave, Stripe
Location Tracking	Google Maps API, Mapbox
Language Switching	i18next, Google Translate API
Messaging	Twilio, WhatsApp Cloud API
Notifications	Firebase Cloud Messaging (FCM)
Verification (KYC)	Smile Identity, ShuftiPro, VerifyMe Nigeria • Smile Identity — Africa’s KYC/ID verification • ShuftiPro — Global ID check

GLOBAL SCALABILITY STRATEGY

(Starting from Nigeria → US, UK, Others)

Launch Strategy:

Phase	Focus	Actions
Phase 1: Nigeria	Urban centers (Calabar, Lagos, Abuja, PH)	- Build trusted verifier network manually

- Form early user partnerships
- Stress-test escrow + review system
- Validate revenue model (PPV + VIP) |
| G B U S
- Phase 2: Diaspora → UK, US | Target Nigerian/African diaspora communities | - Use diaspora influence (WhatsApp, TikTok, Reddit)
- Allow UK/US users to request verifications in Nigeria

- Expand to local US/UK use cases (Craigslist, Kijiji, Facebook Marketplace scams) |
- Phase 3: Global B2B & API Use Cases | Small e-commerce vendors, last-mile delivery firms, marketplaces | - Offer API for verification-as-a-service
- Plug into local logistics platforms
- Offer white-label solutions for governments or security agencies

II. VERIFIER SECURITY & LEGITIMACY LAYERS

We need to ensure trust, accountability, and traceability. Here's how:

Layer	Description	Tools/Methods
1. Identity Verification (KYC)	All verifiers must pass a digital onboarding process	- NIN/Bank BVN verification (via Smile Identity, VerifyMe)

- Selfie + ID scan + face match
- Video confirmation calls |
- | 2. Background & Skills Check | Verify domain-specific expertise | - Test tasks (e.g., can they assess a building? Take clear product videos?)
- Peer endorsements or referral verification
- Industry-specific badges |
- | 3. Device & Location Verification | Ensure presence & authenticity | - Device fingerprinting
- Mandatory real-time GPS tracking
- Time-stamped photos/videos from device |
- | 4. Escrow-Linked Performance | They only get paid after approval | - Escrow fund release after review approval
- Disputes handled with peer feedback & support agents |
- | 5. Star-Rating & Blacklist System | Ongoing public trust score | - Users rate verifiers
- Low performers flagged or suspended

- Super verifier badge for top performers |
| 6. NDA or Platform Agreement | Prevent misconduct or info leaks | - Enforce digital signature
- Discreet client protocols (e.g., sex workers)
- Media expiry rules (self-destruct videos) |

COMPETITIVE ANALYSIS

In Nigeria / Africa

Competitor	Category	Core Offering	Strengths	Gaps / Limitations	Checkamo Advantage
VerifyMe Nigeria	Identity Verification	National ID, BVN, address, and employment verification for individuals	Regulatory compliance; integrated with NIMC, BVN, and more	Focused mainly on identity data, not on-ground product/property verification	Checkamo goes beyond ID — includes physical verification by local agents
Car45 / Autochek	Auto Inspection / Sales	Vehicle inspection, valuation, financing, and resale	Automotive niche expertise; structured inspection process	Limited to vehicles; not peer-to-peer or cross-category	Checkamo supports multi-category verification (not just cars)
Jiji Inspectors	Online Marketplace + Inspections	Inspectors available for buyers/sellers for physical items (e.g. phones)	Plugged into active e-commerce traffic	Only available within Jiji ecosystem; no open platform	Checkamo is a neutral platform, usable across platforms/markets

Delivery Apps (Kwik, GIG, Gokada)	Logistics / Delivery	Pick-up and delivery of items, real-time tracking	Fleet infrastructure; real-time movement tracking	Do not verify package contents; focused on transport	Checkamo can verify before delivery, not just move goods
NaijaProperty / PropertyPro	Real Estate Marketplace	Listing of properties for rent/sale; some offer virtual tours	Popular platforms with wide inventory	No human check or due diligence layer	Checkamo sends agents to physically verify listings before rent/purchase
Checkamo	Decentralized Verification	Physical (and AI) verification of products, people, places, promises by local verifiers	Multi-category, trust-powered, AI-driven, real-time verification	Still building user base; trust depends on verifier quality & incentives	Unique social trust layer bridging identity, logistics, and local verification

Competitive Advantage: No one is combining products + people + properties + discreet verification + human review like us.

Globally

Competitor	Focus	Threat Level	Notes
TaskRabbit	On-demand local tasks	 Moderate	Mostly service-focused, not product/property verification
Truspilot / Yelp	Reviews of businesses	 Low	Reviews only; no real-time inspection
WeGoLook (USA)	Verifiers for e-commerce, insurance	 High	Closest in concept — but very formal, slow to scale to Nigeria/US grassroots

Competitor	Focus	Threat Level	Notes
Thumbtack/ Angie's List	Local services with ratings	 Medium	Only services, not product validation
Craigslist/Ebay Sellers	Often scam-prone	 Opportunity	Your platform would solve what these lack: external verification

No one is combining all of these features into a localized, trust-first platform with layered security and casual-to-corporate use cases.

FEATURES AND REQUIREMENTS

MVP Launch Priorities:

- Build verifier onboarding flow with ID upload + live photo
- Integrate GPS tracking
- Add photo/video upload with timer/restrictions
- Build ratings + coin reward system
- Enable VIP mode toggle (access unlock features)

Validate With:

- Apartment seekers in Lagos, Calabar, other towns.
- Farmers in rural areas (land labor use case)
- Diaspora buyers trying to shop local
- Discreet clients verifying others (use private mode)

ASSUMPTIONS

PART 1: What If Customers & Verifiers Go Off-Platform?

Problem:

- Users may exchange numbers early and move to WhatsApp or Telegram to avoid platform fees or scrutiny.
- This leads to:
 - Untracked abuse, scams, or threats
 - No data or reviews for your platform
 - Lost revenue
 - Damaged trust in your brand if something goes wrong

How to Prevent or Minimize This

1. Delayed Contact Sharing

- Allow chat within your platform (in-app or web-based)
- Only unlock phone numbers after payment, or once an agreement has been accepted (e.g. escrow is funded)
- Notify both parties: "For safety and support, keep communication on-platform until verification is complete."

2. Masked Numbers (Long-Term Solution)

- Use Twilio or WhatsApp Business API to mask phone numbers.
- User messages go through your system without revealing actual numbers — just like Airbnb or Bolt does.

3. In-App Messaging & Voice

- Basic in-app chat and voice notes (recorded/stored) discourage risky migration.
- Add notification: *"This chat is secured and monitored for your safety."*

4. Add Policies in Your Terms

- Clearly state that if any user or verifier leaves the platform and faces a problem, you cannot guarantee safety, refund, or protection.
- Include a “*Report Off-Platform Dealings*” button — reward those who report attempts.

5. Rewards for Good Behavior

- Offer coins or VIP perks for users and verifiers who complete 3+ verifications fully on-platform.
- Add “Trusted Partner” badges for users with no violation reports.

If They Go Off-Platform — What Can You Guarantee?

Guarantee	Condition	Limitations
Refunds / Dispute Support	Only if all transactions, chats, and uploads were done within platform	No help for off-platform deals
Rating & Mediation	Available only with platform history	Can't suspend or punish bad behavior off-platform
Access to Verifier Record	Available with timestamped media, messages, GPS, escrow logs	None if done externally
Escrow Fund Safety	100% refund possible if task was canceled or failed due to verifiable reasons	User takes risk off-platform

Key Statement:

“Checkamo can only protect your money, media, and safety if your engagement happens on our platform. Once you go off-platform, we can no longer verify anything.”

Possible Abuses & How to Monitor/Prevent Them

Abuse Type	Who May Do It	Solution
Scams (fake verifications)	Fake verifiers	KYC + GPS + timestamped media + reviews

Sexual exploitation	Clients or verifiers	Discreet mode + reporting + auto-ban triggers
Price negotiation off-platform	Both	Delay phone number access; in-app incentives
Video/photo theft or leaks	Users or verifiers	Add watermarks, expiry timers, view-once limits
Catfishing or fake identity	Clients, sex workers	ID verification, selfie video, live confirmation call
Money extortion	Verifiers or clients	Use escrow only; log all messages and media

AI integration for CheckamO

TOP AI INTEGRATION OPPORTUNITIES for Checkamo

AI Use Case	Description	Business Value
1. AI-Powered Verifier Matching	Match users with the <i>best-fit</i> verifiers based on task, location, reviews, past jobs, availability, language, etc.	Faster service, fewer failed verifications, increased trust & retention
2. Smart Risk Scoring / Fraud Detection	AI analyzes red flags in user activity, behavior, speech/text patterns, location anomalies	Detect fake verifiers, prevent scams, boost trust — <i>essential for investors</i>
3. Natural Language Job Processing (NLP)	Users type “Help me check 2-bedroom flat near Ikeja” — AI auto-parses the need and suggests a verifier or builds the job post	Reduces friction; even uneducated users can post requests easily
4. AI-Powered Danger Zone Alerts	Automatically flags trends or complaints about certain products, people, or locations	Protects users & adds value to the Danger Zone idea
5. Auto Review Summarization	AI summarizes many reviews into a digestible “highlight box”	Saves time, builds trust, looks premium

AI Use Case	Description	Business Value
6. Smart Pricing Suggestions	AI recommends prices or bid amounts for verifiers, delivery, or clients based on market demand	Boosts conversion and verifier earnings
7. AI Assistant or Chatbot for Onboarding & Help	A multilingual AI bot helps new users or verifiers get onboarded quickly	Lowers support costs, improves UX, builds local loyalty
8. Content Moderation	AI detects nudity, hate speech, scam offers in posts, comments, or uploaded files	Saves moderation costs; investors love this
9. Document Verification (via OCR)	Verify ID cards, receipts, or tenancy docs with AI for faster onboarding or property trust badges	Revenue from premium verification and trust services
10. Voice-to-Text Notes / Translations	Verifiers can speak comments (in Hausa, Igbo, Yoruba), and AI transcribes or translates for the client	Inclusive, efficient, and a game-changer in local markets

Strategic Benefits of AI for Sustainability & Revenue

Area	AI Advantage
Investor Attractiveness	“AI-powered trust network” has stronger pitch power & valuation premium
Operational Cost	Automate onboarding, matching, moderation — fewer staff needed
Revenue	Offer premium AI features (priority matching, auto-summary, smart price prediction) as paid upgrades
User Retention	Users stay when the platform feels “smart,” intuitive, and quick
Scalability	AI allows Checkamo to run efficiently in 10+ countries with fewer people
Local Relevance	Multilingual NLP and speech-to-text allows inclusion of <i>non-English users</i>

Suggested AI Tools & Tech Stack (Starter Tier)

Task	Tool Example	Notes
Matching & Ranking	OpenAI embeddings, Pinecone vector search, LangChain	Match user needs to best verifiers
NLP & Chatbot	OpenAI (GPT-4), Rasa, Google Dialogflow	Easy to integrate with website/app
Content Moderation	Hive, Microsoft Azure Content AI, Google Vision	Auto-flag harmful or fake uploads
Translations / Voice	Google Cloud Speech API, OpenAI Whisper, DeepL	Translate from local languages
Fraud/Risk Scoring	AWS Fraud Detector, custom ML models (Python/Sklearn)	Essential for scalable trust layer

MVP AI Features

Feature	AI Used	When
Smart Verifier Matching	Basic ML or GPT-based search	MVP
NLP Job Request Parsing	GPT-4 or Rasa NLU	MVP
Review Summarization	OpenAI or Cohere API	Phase 2
Auto Translation / Voice Notes	Google Speech-to-Text + OpenAI Whisper	Phase 2
AI-Powered Danger Alerts	Simple trend detection or rule-based NLP	Phase 2 or 3

Additional Tips to Attract AI-Focused Investors

- Position Checkamo as a "trust intelligence layer" — not just a verification tool

- Use the phrase: **“AI-powered human trust network for the informal economy”**
- Prepare a slide that says:

“Our AI learns from 1000s of jobs, reviews, and user behavior to detect fraud, match the best verifiers, and protect our users — automatically.”

PHASED AI INTEGRATION ROADMAP FOR CHECKAMO

Checkamo: Trust-powered Ecosystem with AI

Phase	AI Feature	Description	Tools/API	Revenue/Trust Value
MVP (Month 1–3)	AI Verifier Matching	Match clients with best-fit verifiers (location, skill, reviews)	GPT-4 / embeddings / simple ML model	Faster service, high client trust
	Smart Request Parsing	User types “2-bedroom flat in Ikeja” → structured listing	OpenAI / Rasa	Easy request posting
	Review Summarizer	Show highlights like “Most say this place is neat”	GPT-4 / Cohere	Faster decision-making
	Voice-to-Text Notes	Verifiers speak Yoruba/Igbo, system transcribes/auto-translates	OpenAI Whisper + DeepL	Inclusive access
Phase 2 (Month 4–7)	Content Moderation	AI checks photos, posts, comments for fraud/nudity	Hive / Azure Content Safety	Platform safety, compliance
	Auto Danger Alerts	NLP checks for risky vendors/locations	Rule-based NLP + GPT	Warn users in time
	Smart Verifier Tiers	AI recommends verifier upgrades (based on success score)	ML logic	Internal incentive system
	Tips & Pricing Suggestion	Suggest tips or bids for clients/verifiers	Simple ML model	Boost revenue & fairness

Phase	AI Feature	Description	Tools/API	Revenue/Trust Value
Phase 3 (Month 8–12)	Aggregator AI (Search + Links)	Users search for a phone, property, etc → AI fetches from Jiji, Amazon, Konga, etc with preview links	Custom web scraping OR affiliate APIs (Jiji, Amazon Associates)	Builds trust, expands use cases, affiliate revenue
	Auto Detect Scam Posts/Reviews	AI flags copy-paste posts, false reviews	Pattern detection / GPT	Guard trust reputation
	NLP Chatbot Assistant	Multilingual support for users and verifiers	Rasa / Dialogflow	Lower support cost, better onboarding
Phase 4 (Year 2)	Proactive Suggestions	AI recommends verifiers, safety tips, danger warnings	Behavioral AI / personalization	Loyalty, engagement
	Smart Dispute Handling Bot	Resolves disputes using stored receipts, chat logs, GPS	GPT-4 / logic tree	Speeds resolution, protects both sides
	Risk Engine + Verifier Scoring Model	Dynamic risk score for every transaction	Full ML model	Boosts platform trust in global markets

Pillar	Description
Verification Core	Real-time validation of people, products, and places through human verifiers.
AI Assistant	Chat-based AI helps users search listings, match verifiers, and fetch data.
Escrow/Wallet	Payments are held until verification is completed to user satisfaction.
Media Locker	Stores verification photos, videos, receipts, with access gating via coins.
Referral & Reward	Users earn coins and bonuses for referrals, great reviews, or verifying jobs.

Pillar	Description
Danger Zone DB	Search system for flagged vendors and repeat fraud offenders.
Errand Ecosystem	Verifiers can opt into general errands (e.g., trash-out, pickups, deliveries).
Trusted Vendor Hub	Landlords, stores, and agents can register and show verified status.
Community Governance	Users can review verifiers, flag abuse, and upvote accurate verifications.

AI Integration by Phases

Phase	AI Feature	Use Case / Value
MVP	WhatsApp AI Concierge	User sends “I need a 2-bed flat in Ikeja” → AI finds listings, preview links, etc.
MVP	Smart Verifier Suggestion	AI suggests top 3 verifiers based on location, review, language, availability.
Phase 2	Auto-fill Request Field	AI guesses intent and auto-fills: “Looks like you want a house in Lekki...”
Phase 2	Media Sentiment Checker	AI reviews images/videos for tampering or inconsistency.
Phase 3	NLP Chatbot on Web & WhatsApp	Voice/text conversations in Pidgin or English for job creation or customer support.
Phase 3	AI-Powered Search Integrator	Pulls listing previews from APIs (Jiji, Amazon, Jumia, etc.)
Phase 4	AI Trust Scoring Engine	Scores vendors/verifiers based on behaviors, past reviews, and peer validation.
Phase 4	Discreet Identity Matching	For sex work or sensitive requests, AI anonymizes data for safer matching.

DESIGN REQUIREMENT

CHECKAMO LANDING PAGE — FULL COPY & STRUCTURE

● HERO SECTION

Element	Copy / Feature
Headline	“Don’t Guess. Check am o!”
Subheadline	#1 platform to verify products, properties, and people before you commit.
CTAs	♦ Join the Waitlist (Button) ♦ Explore Checkamo (Button)
Visuals	Background showing a real verifier sharing location, camera view, video preview, and client reaction on mobile.
Note	Optional: Add a short animated preview of “how it works” (auto scroll or short video).

🔥 PROBLEM SECTION

Visual Icon	Copy Snippet
🏠 Apartment fraud	“I paid for an apartment in Abuja. When I got there, it didn’t exist.”
📦 Vendor scams	“The product looked real online, but they ghosted me after payment.”
👤 Unsafe gigs	“Sex workers & freelancers are getting scammed or endangered daily.”
⌚ Time lost	“I’ve wasted full days trying to inspect a property with shady agents.”

Tagline: “Scammers are getting smarter. So are we.”

SOLUTION SECTION (HOW CHECKAMO WORKS)S

Step	Description
Step 1	Type what you want verified. (Property, product, person, vendor.)
Step 2	Choose from trusted verifiers nearby (or let us assign one).
Step 3	Receive visual proof: Photos, video, voice notes, comments, and verifier GPS.
Step 4	Tip or pay only if satisfied. All media and location are stored securely.
Step 5 (optional)	Leave a review and join the trust revolution.

LANDING PAGE COPY GUIDANCE

Section	Voice/Tone	Notes
Hero	Bold + Relatable	Mix of Pidgin and standard English
Problem	Empathetic + Real	Include direct quotes, first-person
Solution	Confident + Easy	Use simple 4-step illustrations
Features	Functional + Visual	Icons, gifs, short headlines
CTA	Action-based	Multiple buttons and opt-in points

PLATFORM STRUCTURE: LANDING PAGE + PRODUCT

LANDING PAGE STRUCTURE

Section	Purpose	Feature	Copy Guidance
Hero	Instant value	Headline, CTA	"Don't Guess. Check am o!" "Join the Trust Revolution"
Problem	Relatability	Icons + text	"Scammers are getting smarter. So are we."
Solution	Clarity	4 steps (How it works)	Simple visual flow of verification journey
Industries	Range	Icons/cards	Real estate, logistics, events, errands, gigs, agriculture, etc. Add CTA to try a demo
Danger Zone	Transparency	Community reports	Show list of flagged vendors or agents
Request Verification	Entry point	Input field placeholder: "What do you want verified?"	
Referral & Tips	Engagement	Coins, tips, and top performer rewards	Encourage virality and appreciation
Suggest an Industry	Growth	Input form to suggest industries	Co-create with your audience
CTA	Signups	Waitlist form, verifier recruitment	Join now or refer a verifier to earn coins
Footer	Info	Blog, T&Cs, Support	Keep trust-focused tone

FULL LANDING PAGE COPY

[Hero Section]

- *Headline:* Don't Guess. Check am o!
- *Subtext:* #1 platform to verify products, properties, and people before you commit.
- *CTA Button:* Join the Waitlist | Explore Platform Preview

[Problem Section]

- Scammers are getting smarter. So are we.
- “I paid for an apartment, but it didn’t exist.”
- “That iPhone was fake. The vendor disappeared.”

[Solution Section]

- Checkamo sends real people to verify things for you.
- You get photos, videos, reviews, and receipts.
- Escrow or tip when you’re satisfied.

[Industries We Serve]

- Real Estate
- Logistics & Errands
- Freelance & Gigs
- Marketplace Goods
- Companionship & Sex Work
- Agriculture
- Events
- NGOs & Recruitment
- E-commerce Vendors

[How It Works]

1. Tell us what you want verified
2. Choose from trusted verifiers nearby
3. Receive visual proof (photo, video, comment)
4. Pay only when confident. Tip if you’re impressed

[Danger Zone] Search phone numbers or names with scam alerts. Flagged profiles show up in red.

[Referral & Rewards] Refer a friend, earn coins. Be a top verifier, earn weekly bonuses.

[Suggestions Section] Tell us what industry we should verify next!

[Join Waitlist CTA]

- Want early access?
- Want to earn verifying?
- Need discreet clients verified? → Join Now

Key features and Requirements

Feature	What it Does
AI Matching	AI recommends the best verifiers based on location, reviews, language.
Live GPS	Verifier turns on location; you track verification in real time.
Media Uploads	Verifiers send photos, voice notes, videos. Paid access for full media.
Danger Zone	Public database to search flagged scammers by phone, name, or email.
WhatsApp Bot	Ask: “I want a 2-bedroom in Lekki” → AI sends listings with verify button.
Escrow System	Hold money in wallet. Pay only when happy with results.
Swipe Preview	Tinder-like UI for viewing property/product. Max swipes unless upgraded.
Tips & Coins	Users tip verifiers. Earn coins by referring others or verifying.
Receipt Locker	Store proof of verification & downloadable receipts.
Verified Verifiers	Each verifier has profile, reviews, success rate, location reach.
Errand Mode	Post tasks: laundry, trash-out, shopping. Verifiers take them.
Vendor Call Access	Pay to unlock verified vendor or landlord contact.

DANGER ZONE (Flag & Search Suspicious Vendors)

Feature	Purpose
Search bar	Enter phone number, vendor name, or IG handle
Flag vendor	Add negative review, evidence, report scam
Browse alerts	See red-flagged profiles with type of scam
CTA	“Have you been scammed before? Report it now”

REFERRALS & COINS

Offer	Reward
Refer a friend to verify something	Earn 5 coins
Become a top verifier	Weekly airtime or cash bonus
Tip a verifier	Optional reward system post-job

EARLY ACCESS CTA SECTION

Text	Buttons
Want to try Checkamo before launch? Or ready to earn as a verifier? Or prefer discreet verified access?	Join Early Access Become a Verifier

First Industry to Explore

Based on trust pain points, revenue potential, and scalability, Checkamo will be starting with:

Apartment & Property Verification.

Here's why:

Factor	Apartment/Property	Why it wins
Revenue	Medium–High	Most people are willing to pay ₦1000–₦5000 to verify before renting or buying.
Trust Criticality	Very High	Lots of scams, especially in urban cities like Lagos, Abuja, PH.
Scalability	High	Every city, every season, especially student and work relocation periods.
Word of Mouth	Strong	People refer agents, house apps already. Adds virality.
Easy MVP Start	Yes	Clear photos, videos, location, and verifiers are easy to onboard locally.

Optional Extras (for future/scale)

Feature	Purpose	Phase	Look & Feel	Placement
Live Counter or Map	Show activity or coverage	Phase 3	"123 verifications completed today"	
Map showing real-time verified locations	Above testimonials			
Demo Video / Explainer	Visual storytelling	Phase 2/3	1–2 min animated video or screencast	
"See how it works in under 90 seconds."	Between Use Cases and CTA			
Trust Badges / Security Icons	Reinforce safety	Phase 2	Icons for: Escrow Secured, Verified IDs, Location Tracked, Discreet Mode	Scattered near CTAs and testimonials

POST-LOGIN CORE PLATFORM PAGES

Once users or verifiers log in, they enter the real platform dashboard.

A. For Clients (Requesters)

Page Elements/Features

Dashboard - Welcome message

- Coins balance
- Quick Request button
- Active Verifications
- History tab

- VIP access CTA |
| Submit a Verification | - Choose: Product / Property / Person
- Description field
- Upload reference photo (optional)
- Choose Location
- Language preference
- Budget (₦ range)
- Button: Request Verification |
| Verification Results Page | - Photos
- Video (if unlocked)
- Verifier comments
- Voice notes
- Ratings and stars
- Escrow status: “Pending, Confirmed, Refunded”
- Button: Approve + Release Payment |
| Payment Gateway | - Paystack/Flutterwave
- Escrow terms visible
- Toggle: One-time or VIP
- Payment methods: card, transfer, USSD |
| Referral Program | - Link/code
- Number of referrals
- Coins earned
- Redeem coins |
| VIP Upgrade Page | - Plan options:
→ Monthly
→ Quarterly
→ Annual

- Features unlock chart:
 - ✓ Unlimited videos
 - ✓ Save media
 - ✓ Skip wait
 - ✓ Full verifier profile |
 - | Inbox/Chats | - In-app messaging
- Upload button
- Voice note recording
- “Report this verifier” button |

B. For Verifiers

Page Elements

Dashboard - Tasks available nearby

- Earnings this month
- Verification success rate
- Badge status: Bronze, Silver, Gold |
- | Accept Tasks | - Filters by distance, price
- Preview request (text + media)
- Accept or Decline
- Mandatory: Enable Location
- Button: I’m On My Way |
- | Submit Verification | - Upload photos
- Upload video (max 2 mins)
- Record voice note
- GPS automatically attached
- Optional: Type summary |
- | Profile | - Name + Profile Photo

- Verified ID badge
- Reviews by users
- Area of specialization
- Languages spoken |
| Payouts | - Completed tasks
- Balance
- Bank info
- Request Withdrawal |

3. ADMIN / SUPPORT / VENDOR TOOLS

Tool	Description
------	-------------

Admin Dashboard - View users, verifiers, active tasks

- Suspend, approve, verify manually
- Escrow manager
- Reports dashboard |
| Vendor Integration Area | - API documentation
- “Request to List Product for Verification” form
- “Upload Storefront” option |
| Analytics Dashboard | - Verifications by location
- Repeat user count
- Top verifiers
- Fraud/flag rate
- Payout flow |

BUTTONS WE’LL NEED (Full List)

Category	Buttons/CTAs
General	Sign Up / Log In / Switch to VIP / Become a Verifier
Request	Request Verification / Upload Image / Submit Voice Note / Choose Language
Payments	Pay & Begin, Unlock Video, Release Payment, Upgrade to VIP
Referral	Refer Friend, Copy Link, Redeem Coins
Support	Report User, Contact Support, View Terms, See FAQs

Danger Zone Section

What Works:

- Encourages transparency and community warnings
- Users can search past scam cases or verified offenders
- Makes people think twice before engaging shady agents/vendors

RISK AND MITIGATION

Issue	Risk
Defamation	Someone falsely accuses a vendor or person
Legal trouble	If someone sues over bad reviews or identification
Moderation burden	You’ll need admins/moderators to filter abuse, hate speech, or threats
Privacy concerns	Especially if someone uploads contact info or identifiable images

Solution:

- Add terms & disclaimers: “This area contains unverified experiences shared by the community.”
- Require user login to post
- Allow reported persons to respond
- Use a badge/tag system rather than exposing full identity

2. Smart Search + Verified Pitches

Placeholder: “What do you want verified?”

What Works:

- User-first design — direct and intuitive
- Allows user to post specific concerns or needs
- Verified verifiers can pitch or apply (like Upwork/Fiverr)
- Clients can browse trusted verifiers by rating, distance, or speed

Potential Challenges:

Issue	Risk
DM system abuse	Verifiers or users might try to bypass the platform
Cluttered pitches	Too many verifiers pitching at once
Fake accounts	Spammers or impersonators

Solution:

- Use controlled DM or bidding system (like Fiverr or Uber driver match)
- Allow client to choose between:
 - Auto-match (suggested verifier)
 - Manual pick from list
- Limit number of pitches (e.g., top 3 most relevant)

Conclusion: YES. This is core to your trust-driven model. Just filter pitches and structure well.

3. Tipping System for Verifiers

What Works:

- Motivates verifiers to go the extra mile
- Rewards honesty and speed
- Brings service culture to the platform

Potential Concerns:

Issue	Risk
Tip confusion	Is it expected? Is it a bribe?
Bias	Some verifiers may “upsell” for tips
Platform cut?	Who gets how much?

Solution:

- Make tipping optional and post-delivery
- Add note: “100% of tips go to the verifier”
- Optionally allow tipping in-app credits or local currency

4. VIP Clients – Direct Verifier Pool

“Some users may want to work directly with us for discreet needs.”

What Works:

- Elite, curated experience for sensitive industries or VIPs
- Builds platform trust and opens higher pricing tiers
- Allows for NDAs, private verification rooms, stricter policies

Concerns:

Issue	Risk
Safety/Exposure	If verifiers mishandle private client jobs
Platform responsibility	Are you liable if something goes wrong?
Abuse risk	If someone pretends to be VIP or bypasses rules

Solution:

- Build a “Private Verify” product tier
 - Onboarding for both clients & verifiers
 - NDAs & stricter approval
 - Optional platform-appointed verifier

5. Industry Suggestion Box**What Works:**

- Collects real-world demand from users
- Helps prioritize features, markets, and focus
- Shows community-driven product growth

Small Concerns:

- Spam or joke submissions
- Ignored suggestions hurt engagement

Solution:

- Add a simple form: “What industry do you want Checkamo to enter next?”
- Reward ideas with coins
- Highlight top suggestions on homepage or social posts

What to pay attention to in CheckamO

Category	Recommendation
Security for Big Brands	Set up a KYC & verifier vetting system. Use government ID, NIN (Nigeria), or digital onboarding (e.g., Smile Identity, VerifyMe).
Verifier Delivery Requests	If verifiers are later tasked with buying + delivering, consider a hybrid trust tier or partnership with trusted 3rd-party delivery logistics.
Law & Legal Risk	Build clear terms and conditions, define platform liability, and have a reporting + resolution system to manage disputes, abuse, and harassment.
Verifier Verification	Build a 2-stage process: Self-verification (ID, contact, past gigs) → Peer-reviewed ratings and client reviews. Possibly use community moderation.
AI-Driven Discovery	Explore future Chatbot/AI integration with real-time suggestions pulled from platforms like Jiji, Amazon, or Craigslist, utilising their APIs.
Discreet Use-Cases	Introduce anonymised profiles or “shielded mode” for sensitive industries (like sex work). Allow view-once + encrypted chat/media.
Regulatory Collaboration	Begin early collaboration with local law enforcement (e.g., for danger zone posts) to build credibility, safety, and legal protection.
Platform Abuse Prevention	Include blocks against: fake verifiers, harassment, spamming, data scraping, revenge posts, or impersonation. Use manual review + ML later.
Startup IP & Protection	Next steps: NDA with contractors, Copyright logo, Postpone trademark if needed.
